

It's not only 4,500,000m³ of landfill space that our recycling has saved.

Since operations began in 1992, ResourceCo has recycled over 9 million tonnes of construction waste. Instead of going into landfill, we've transformed this waste into a wide range of construction materials, saving the land and the eco-systems that depend on it. South Australian customers of ResourceCo have actually recycled enough material to construct 2-lane highways from Adelaide to Darwin and Adelaide to Perth. ResourceCo also, utilising the most advanced recycling technology, every month turns over 14,000 tonnes of commercial and industrial waste into alternative fuel. Such is the fuel's potential, and thanks to our venture partner SITA Environmental Solutions, this SA born initiative is now heading to other states in Australia. A Zero Waste solution that Australia needs, and the environment is depending on.
